Norway Spruce - Picea Abies 6/7'	\$750.00	\$650.00	\$550.00

1-YEAR LIMITED WARRANTY ON ALL PLANTED TREES

TREES

TREE PLANTING WARRANTY

Parshall Tree Care Experts would like to thank you for choosing us as your preferred Urban Forest Managers. The purchased trees are accompanied with a one year limited warranty as follows:

Limited Warranty:

Your newly installed tree(s) are accompanied by a 1-year limited warranty if maintained per the standards below.

The newly installed landscape trees will suffer transplant shock, particularly during the hot summer months. It is imperative the trees receive proper care, so as to minimize stress. Upon installation, it is then the responsibility of the owner to supply the plant with sufficient water during their growing season (May to October) to keep them healthy. Trees are warranted for one year from the date of installation and will be replaced once within the warranty period, should they die.

Parshall Tree Care Experts will make warranty replacements during the optimum planting seasons: Spring and Fall. **Typically, replacements will take place between May 1st through June 30th and September 1st through November 15th.**

Parshall Tree Care Experts assumes no liability for replacement of trees killed or damaged by pests, insect infestation, abnormal weather conditions, or other conditions beyond our control, nor will we replace trees experiencing "seasonal die-back", when pruning and proper care will restore them to health.

This warranty shall be void and will not apply to any trees which were originally installed by Parshall Tree Care Experts, then subsequently repaired, adjusted, moved or modified by an individual or entity other than Parshall Tree Care Experts.

Required Tree Maintenance:

Water, Water, Water! Your new trees will need an inch of water per week for the first year. *IF YOU FAIL TO WATER YOUR PLANTS, THEY WILL DIE. A TREE THAT HAS DIED DUE TO DROUGHT IS NOT COVERED UNDER OUR GUARANTEE.*

In the heat of summer, you may have to water daily. Don't forget to keep watering during the fall! Soaker hoses and a timer system may be used to save time and money, however, you must ensure that sufficient water penetrates the rootball of each tree. Water should pool up at the base of the tree when the soil has been adequately saturated. Water not only under the drip line of the tree, but also several feet out from this. Otherwise, dry soil will wick away moisture from roots. If planting occurs in the Spring, water 3 times minimum per week, for the first 3 weeks, whether it rains or not, then after the first 3 weeks, water twice per week whether it rains or not. If the planting occurs in the Fall, and the tree still has it's leaves, follow the aforementioned watering guidelines until the leaves fall off. If the tree has lost its leaves, soak thoroughly one time after planting. Begin watering again in the spring when the new foliage appears, following the aforementioned watering guidelines. Monitor the trees after the first 3 weeks and apply additional water as necessary. It is best to water early in the morning to prevent evaporation or rot if watered too late in the day.
